Sequence 1, Application US/10158865

Publication No. US20040203093A1

GENERAL INFORMATION:

APPLICANT: Fleischmann et al.

TITLE OF INVENTION: Nucleotide Sequence of the Haemophilus Influenzae Rd G

TITLE OF INVENTION: Thereof, and Uses Thereof

FILE REFERENCE: PB186P2CLD1

CURRENT APPLICATION NUMBER: US/10/158,865

CURRENT FILING DATE: 2002-06-03

PRIOR APPLICATION NUMBER: US 09/557,884

PRIOR FILING DATE: 2000-04-25

PRIOR FILING DATE: 1995-06-07

PRIOR APPLICATION NUMBER: US 08/476,102

PRIOR APPLICATION NUMBER: US 08/476,102

PRIOR FILING DATE: 1995-04-21

NUMBER OF SEQ ID NOS: 1

SOFTWARE: Patentin version 3.1

Novel polynucleotides and polypeptides associated with microorganism proliferation, used to identify inhibitors of bacterial growth and proliferation, for use in antisense therapy.

Claim 8; Page 146-147; 316pp; English.

AAA65809 to AAA65889 and AAA66058 to AAA66138 represent nucleotide sequences derived from Escherichia coli which inhibit E. coli proliferation. AAA65890 to AAB168055 and AAB15886 to AAB16040 represe nucleotide and protein sequences associated with E. coli proliferation. E. coli proliferation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        proliferation inhibiting nucleotide inserts in an example from the present invention. Methods from the present invention can be used to identify a proliferation-required gene in a microorganism, by contacting a microorganism with a proliferation-required gene activity inhibitory nucleic acid identified in another organism, and determining if inhibition occurs in the second microorganism. The nucleic acid sequences identified as being required for bacterial growth and proliferation, can be used for antisense therapy for killing bacteria
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1434 BP;

CC The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes could be used to the encoded proteins. The prokaryotes used are Bacherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, coli, Staphylococcus and Enterococcus faecalis. The invention is also cuseful for the identification of potential new targets for antibiotic colored to the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acids sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent color format directly from WIPO at cellular intromb/mbhlished not served.

                                                                                                                                                                                                                                                                                                                                                                                                                      र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a purified or isolated nucleic acid CC sequence (I) consisting essentially of one of the 93 nucleotide sequences CC given in AAH81202 to AAH81294, where expression of the nucleic acid in a CC microorganism is capable of inhibiting proliferation of a microorganism.

(I) have antibacterial and antibiotic activities, and can be used in gene CC the microorganism, and the manufactured antibiotic is useful for reducing the activity or level of a gene product required for proliferation of a microorganism in a subject, specifically humans. The nucleic acids that CC inhibit bacterial growth or proliferation can be used as antisense CC therapputics for killing bacteria. In addition to therapeutic acid sthat CC applications, the nucleic acid sequences complementary to sequences concluded for proliferation can be used as diagnostic tools. For example, nucleic acid probes complementary to proliferation required sequences that are specific for particular species of microorganisms can be used as concluded as diagnostic tools. For example, cc probes to ldentify particular species of microorganisms can be used as given in AAG98239 to AAG98431, and AAH81488 to AAH81491 represent colinocal colinocal which are used in the exemplification of the present colinocal colinocal which are used in the exemplification of the present colinocal colinocal which are used in the exemplification of the present colinocal colinocal which are used in the exemplification of the present colinocal invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

cc the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid concoling a polypeptide whose expression is inhibited by the antisense concoling a polypeptide whose expression is inhibited by the polypeptide or its fragment whose expression is inhibited by the cantisense concoling a polypeptide; (2) a host cell containing the vector; (3) an isolated containing the vector; (3) an isolated containing the polypeptide; (4) an isolated containing the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular containing the polypeptide; (7) identifying a compound that influences the activity of the polypeptide; (8) inhibiting cellular proliferation; (7) identifying a gene in an operon required for containing an activity against a biological pathway in which a proliferation, or that inhibits proliferation or the biological pathway in which a proliferation required for cellular proliferation or the biological pathway in which the test compound that inhibits proliferation of an companism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene contains; or (13) identifying the target of a compound that inhibits the gene contains; or (13) identifying the target of a compound that inhibits the condition of an organism. The antiense nucleic acids are useful for clanuflying proteins or screening for homologous nucleic acids required contains; or contains in which the contains in which the capacity of containing the capac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Wang L,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          gene required for the proliferation in vivo of a pathogenic microorganism. The method comprises determining the virulence of mutant genes on an experimental model of infection, and their effect on enteric colonization in an axenic mouse model. ADH88967-ADH88991 and ADH89982-ADH88996 are pathogenicity or virulence targets and their coding sequences which were used in the method of the invention. Compounds capable of inhibiting pathogenicity or virulence target expression are useful for developing medicinal products for inhibiting a bacterial infection, in particular an extra-intestinal infection in the case of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1434 BP; 328 A; 352 C; 447 G; 307 T; 0 U; 0 Other;

WPI; 2003-029926/02

New antisense nucleic acids, useful for identifying proteins or a for homologous nucleic acids required for cellular proliferation isolate candidate molecules for rational drug discovery programs or screening. 6

Claim 14; SEQ ID NO 20018; 1766pp; English

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression confirmation of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid concoding a polypeptide whose expression is inhibited by the antisense culleic acid; (2) a host cell containing the vector; (3) an isolated continuous control of the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular culliferation or the activity of agene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation or proliferation, or that inhibits gene product lies or agene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound to activity; (11) a culture comprising strains in which the gene compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the test of confideration of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required cor cellular proliferation in cells other than S. aureus, S. typhimurium, C. in the printed specification, but was obtained in the target core produced for the printed specification, but was obtained in celectoric format directly from WIPO at the curron of the compound that proliferation of the printed specification, but was obtained in .int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                    The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This sequence encodes a Klebsiella pneumoniae of the invention
                                                                                                                                                                                                                                                                                                                                                                Sequence 1500
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid encoding a Klebsiella pneumoniae polypeptide, preparing a vaccine composition against Klebsiella pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 27-JAN-2000;

```
The invention relates to antisense inhibitors of genes essential to CC prokaryotic cellular proliferation, their use in identifying the genes, cc their use in the discovery of novel antibiotics, the essential genes cc themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalls. The invention is also cu useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify cc proteins used in proliferation, to express these proteins, and to obtain can be used to screen compounds in rational drug discovery programmes. The can used to screen compounds in rational drug discovery programmes. The can used to acids which are required for cell proliferation in a wide variety cof organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent cc did not form part of the printed specification, but was obtained in the capture of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             23-OCT-2000;

English.

δ 밁 S 당 र् 밁 ঠ F

The invention relates to an isolated nucleic acid comprising any one of CC the 6213 antisense sequences given in the specification where expression CC of the nucleic acid inhibits proliferation of a cell. Also included are: CC (1) a vector comprising a promoter operably linked to the nucleic acid complete acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense CC antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibited by the CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular CC proliferation or the activity of a gene in an operon required for CC the gene product or that has an activity against a biological pathway CC required for proliferation, or that inhibits cellular proliferation; (8) CC required for proliferation, or that inhibits cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an

The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginoss. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 1434 BP; 311 A; 360 C; 468 G; 295 T; 0 U;

                                                                                                                                                                                                                                                                                                                                          र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC the 613 antisense sequences given in the specification where expression could the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid concoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated converse of the polypeptide or its fragment whose expression is inhibited by the antisense compound the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular coroliferation; (7) identifying a compound that influences the activity of a gene an activity of the gene product or that has an activity against a biological pathway or compound that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which the test compound that inhibits gene product lies or a gene on which the test compound that inhibits gene product lies cradius acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the extent to which each of the strains is present in a culture or collection of a compound's activity; (11) a culture comprising strains in which the extent to which each of the strains is present in a culture or collection of cratins; or (13) identifying the target of a compound that inhibits the extent to which each of the strains is present in a culture or collection of cratins; or cellular proliferation to isolate cacids are useful for cellular proliferation to isolate candidate molecules for rational crude of the printed specification, but was obtained in the target prokaryotic essential genes. Note: The sequence data for this patent did credit activity in the target of a cellular for this patent did credit activity.

cc polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular crowding the polypeptide; (6) inhibiting cellular crowding the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway crequired for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which the test compound that inhibits proliferation of an corganism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent convolution of the strains; or (13) identifying the target of a compound that inhibits the gene convolution of an organism. The antisense nucleic acids required for cellular proliferation to isolate candidate molecules for rational convolutions of strains or screening for homologous nucleic acids required for cellular proliferation in cells other than S. sureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did cont form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                        the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operation 11 linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              21-MAR-2001; 2001US-00815242.
